Olha Yatskivska

Middle QA Engineer | ISTQB Certified Tester | Google AI Professional

o.mayovetskaya@gmail.com | (+48) 451 587 090 | LinkedIn | GidHub | Personal QA Library | Gdansk, Poland

5+ years of commercial experience in Agile (Scrum/Kanban) environments

Specialized in **Web/SaaS applications**, **REST API** testing, test design techniques, and **root-cause defect analysis** using system logs, SQL and GenAI with foundational skills in **Playwright**, Pytest, and Python.

EXPERIENCE

May 2024 – Currently
Professional Development & Portfolio

- **Certifications: ISTQB Certified Tester** (Dec 2024), **ISTQB Test Analyst** training (Mar 2025), and exploring GenAI for QA via **Google AI Professional** (Aug 2026).
- Developed a **Personal QA Library** aligned specifically with the ISTQB Test Analyst syllabus, creating reusable cheat sheets and combinatorial test matrices to apply advanced test design techniques in daily work quickly.
- **Automation & Backend Prep:** Completed practical training in **Python**, **PostgreSQL**, **Playwright**, and **Pytest** to strengthen daily testing workflows.
- Currently executing hands-on portfolio projects to bridge theory and practice, including a **phased API testing strategy** for the restful-booker application.

September 2019 – April 2024
QA Engineer, ***Admixer Technologies*** *(5 yrs 9 mos)*

Part-Time June 2021 - April 2024: QA Engineer, Cross-functional Team

- Conducted contract and CRUD **REST API** testing in **Postman**, designing test collections to verify response payloads, status codes, and error-handling logic.
- Tested high-speed, server-to-server Real-Time Bidding (RTB) integrations with external DSPs and SSPs by using Fiddler to intercept live API traffic, performing strict JSON payload validation against industry-standard OpenRTB specifications.
- Derived test conditions from requirements and technical specs, applying test design techniques to build high-coverage functional and regression test suites.
- Executed end-to-end testing cycles and analyzed system logs to perform **root-cause analysis**, logging detailed **Jira** tickets with steps to reproduce, log snippets, and workarounds.
- Managed deployments by triggering CI/CD pipelines to push builds to the Stage environment and execute automated test suites.

Full-time January 2021 - May 2021: QA Engineer, Core Team

- **Promoted to the Core Team** after the successful microservices migration to handle complex cross-platform architecture tasks - ranging from targeted client **pivots** to large-scale ecosystem updates.
- Managed cross-functional QA initiatives across **5 distinct product teams** within a company-wide **Agile/Scrum** framework. (AdExchange, DSP, SSP, Networks, Core) actively collaborated

with Product Owners, BA, PMs, and Data Analysts.

- Executed pair testing via Visual Studio breakpoints for complex backend distribution rules, catching defects in real time to reduce bug-logging overhead by **80%** and cut Dev/QA branch-switching cycles by **30–40%**.

- Designed a proactive automated check to verify data consistency in ClickHouse, which the team evolved into a dedicated automation test that sent automated Slack alerts to stakeholders when data discrepancies were found.

Full-time September 2018 - December 2020: QA Engineer, AdExchange Team

- Performed manual functional and integration testing of complex AdExchange platforms with multiple daily releases.

- Supported the critical backend architectural transition from a C# monolith to GoLang microservices by validating the newly separated routing logic and ensuring data consistency across the new infrastructure and ClickHouse tables.

- Created a dedicated QA Space in Confluence (mapped to Jira) and applied a Shift-Left approach by defining detailed test conditions during early requirement analysis, helping developers write more robust, less buggy code.

- Leveraged this documentation to provide a clear roadmap for the Automation Engineer to build a comprehensive regression suite, which stabilized the system and enabled the release of a White Label AdExchange **prototype in just one month.**

EDUCATION

CERTIFICATIONS

| Google AI Professional Certificate (August 2026) | Test Design Training Certificate (March 2025) | ISTQB Certified Tester Foundation Level (CTFL) (December 2024)

Master's degree, Banking, Ukrainian Academy of Banking of the National Bank of Ukraine

---

SKILLS & TECHNOLOGIES:

- **QA & Methodologies:** Agile (Scrum/Kanban), SDLC & STLC, API Contract Testing, Shift-Left Approach, Exploratory Testing, E2E Integration Testing, Risk-Based Testing, ISTQB Advanced Test Design (Pairwise, Classification Tree, EP, BVA, Decision Table).

- **API & Web Testing:** Fiddler, Postman, REST APIs, JSON/XML Payload Validation, HTTP Traffic Interception, Chrome DevTools (Network/Console).

- **Databases & Backend:** SQL (PostgreSQL, MySQL, ClickHouse), Complex Queries (JOINs, Aggregations), Data Mapping, Relational Schema Architecture, Log Analysis (Graylog).

- **Tools & Ecosystem:** Jira, Confluence, Git & GitHub, CI/CD Pipeline Execution (Azure DevOps), Docker (Foundational), Visual Studio, Python (Foundational), Playwright/pytest (Foundational).

- **Languages:** Ukrainian (Native), English (Upper-Intermediate).
